

Genome-wide gene divergence ranking from rectified_h (absolute score)

Ranking uses $\text{absolute_divergence_score} = 0.6 \times \text{median_difference_structure_score} + 0.4 \times \text{top3_mean_difference_structure_score}$. Only genes with at least 5 retained enhancers are ranked. NEFM and NEFL are highlighted.

NEFM rank=66
score=0.248

NEFL rank=93
score=0.119
