

supt16h weMERFISH locus + spatial raw/latent view

supt16h locus and significant enhancers

Window = ±100,000 bp around supt16h TSS; exclude any TSS ±2,000 bp; peak significance = one-tailed positive Spearman $p < 0.01$; middle track shows diffs. Target latent uses raw RNA -> min-max -> two-state fit -> 3D kNN majority regularization. Spatial panels are independently p99-clipped and rescaled to 0-1 for shape comparison.
